

3b

KIRROUGHTREE VISITOR CENTRE

Role: Principal Contractor **Client: Forestry Commission**

As Principal Contractor, 3b construction delivered major infrastructure and building works at Kirroughtree Visitor Centre within Galloway Forest Park.

The project included road and bridge construction, a SuDS-based car park, building substructures, a complex structural steel frame, and specialist stonemasonry works. Situated adjacent to a protected watercourse and within a designated Dark Sky Park, the development required careful environmental management throughout.

Our in-house Structural Steel division designed, fabricated and erected the steel frame, while our groundworks team delivered the substructure and ground floor slab. Working alongside a live visitor centre and busy forest trails, 3b successfully completed the project with minimal disruption, demonstrating our expertise in delivering complex developments in environmentally sensitive and operational environments.
