EARTHWORKS

ENGINEERED FROM THE GROUND UP. DELIVERED WITH PRECISION.

At 3b Construction, earthworks is delivered as a fully managed package that supports our own construction projects and standalone contracts across Scotland. From initial site strip to formation level, we provide the expertise, supervision and resources required to prepare sites safely, efficiently and in line with programme.

We understand that the ground sets the standard for everything that follows, which is why we focus on precision, sequencing and early engagement to create stable, engineered platforms that allow projects to progress with confidence.

Top soil strip

Breaking out rock to get to formation level

Type 1 imported, spread and compacted

Processing excavated rock for reuse on site

Excavation of rock for Energy Centre construction

Bulk earthworks

topsoiling to landscape areas

Visitors Centre road construction

Our capability includes bulk excavation, topsoil strip and stockpiling, rock breaking, cut and fill operations, imported and processed Type 1 placement, drainage infrastructure, culvert diversions, road construction and finishing works including topsoiling and landscaping. We maximise efficiency by processing and reusing materials on site wherever possible, reducing waste and improving value. Whether delivering complex infrastructure works or preparing sites for commercial development, our team brings practical experience and technical understanding to every stage of the earthworks process.

Compaction of fill material in layers

All works are carried out using our modern, well maintained fleet operated by fully trained personnel holding SMSTS, SSSTS, CPCS and CSCS accreditation. As a member of the Scottish Plant Owners Association, we work to recognised industry standards with safety, quality and reliability at the forefront. Our earthworks division integrates seamlessly with our Construction, Crane Hire and Transport teams, providing clear accountability, efficient logistics and programme certainty from the ground up.

Drainage works

Earthworks plant ready to get dirty

Culvert diversion works before tunnel construction

Breaking out rock to get to formation level
